

Twin Corresponding Sudoku

Twin Corresponding Sudoku is a variation of the standard 9x9 Sudoku puzzle. It consists of two 9x9 grids that share the same numbers in the same positions. The goal is to fill in the numbers 1-9 so that each row, column, and 3x3 box contains all the digits. The twist is that the two grids are identical, meaning that the numbers in the same positions must be the same. This makes it a more challenging puzzle than the standard Sudoku.
