

Twin Corresponding Sudoku

Twin Corresponding Sudoku is a pair of 9x9 Sudokus. The two puzzles are identical, except for the positions of the numbers 1-9. In the second puzzle, the numbers 1-9 are rotated 180 degrees. This means that the number 1 in the first puzzle is in the same position as the number 9 in the second puzzle, and so on. The goal is to solve both puzzles simultaneously, using the fact that the numbers are rotated to help you deduce the correct numbers for each cell.
